

REACTION TESTER

Year 3

This is a simple way of testing your reaction time. Cut out the chart, paste onto card, fold it in half lengthways and glue in place. Ask another person to hold this card about 10cm (4in) above your open thumb and forefinger - like scissors. When they let go of the card you try to catch it.

Read what it says where your fingers are.

Swap over with your partner.

How quickly can you react? How quickly can you react?

<p>Oh dear, sleepy! Your reactions are dangerously slow. Better not do anything that might be risky until you brighten up!</p> <p>HAVE ANOTHER TRY</p>	<p>WAKEY WAKEY!</p>
<p>You need some fresh air! Better concentrate more if you are going to avoid having accidents.</p> <p>HAVE ANOTHER TRY</p>	<p>OH DEAR!</p>
<p>This is below average. You will have to be careful. Better really focus next time.</p> <p>HAVE ANOTHER TRY</p>	<p>SLOW COACH!</p>
<p>Not bad. You will need to react even quicker to stay safe though. Maybe you need more practice.</p> <p>HAVE ANOTHER TRY</p>	<p>AVERAGE</p>
<p>This is a bit better than average. It means you are fairly alert. Are you sure it wasn't a fluke? OK Prove it!</p> <p>HAVE ANOTHER TRY</p>	<p>NOT BAD!</p>
<p>Your reactions are much better than the average. You are very alert and should spot any dangers. Try just a little bit harder.</p> <p>WELL DONE!</p>	<p>WELL DONE!</p>
<p>Excellent! Your reactions are brill! But you need to perform like this all the time near the roads.</p> <p>KEEP IT UP!</p>	<p>SENSATIONAL!</p>
